

WEBSITE HEALTH REPORT

What we found on your site

mizangroupllc.com

Checked 2 October 2026 at 04:21 UTC

93/100

Your site is in good shape.

23 checks passed · 5 could be improved · 0 need action · 2 not checked

Worth doing

Could be improved

DNSSEC

DNSSEC is not switched on for this domain.

WHY IT MATTERS

DNSSEC adds a digital signature to your domain's DNS records, so visitors can't be secretly redirected to a fake website or mail server by someone tampering with DNS answers.

WHAT TO DO

Ask your DNS provider to enable DNSSEC signing, then add the DS record they give you at your registrar (many providers, such as Cloudflare, do both in a few clicks).

Could be improved

Meta description

Your home page description is 177 characters long, so Google will likely cut it off in search results.

WHY IT MATTERS

The meta description is the short summary Google often shows under your title in search results. A clear one or two sentences helps people decide to click.

WHAT TO DO

In your website builder, open the home page settings and look for "SEO description" or "meta description". Write one or two sentences, 70 to 160 characters, saying what you do and where.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Description: Computers, networks and websites for homes and small businesses in Northern Virginia. Fixed prices in writing and one point of contact, from the first call to the final invoice.
- Length: 177 characters

Could be improved

Content Security Policy

No Content Security Policy is set.

WHY IT MATTERS

A Content Security Policy tells browsers which sources of scripts and other content your website trusts. If an attacker manages to slip malicious code onto a page, the browser refuses to run it.

WHAT TO DO

Ask your web developer to add a Content-Security-Policy header. They can start in report-only mode to see what would break before enforcing it.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Checked page: <https://www.mizangroupllc.com/>

Also worth improving

Could be improved

X-Content-Type-Options

The nosniff protection is not switched on.

WHY IT MATTERS

This setting stops browsers from guessing what type a file is. Without it, a file that should be treated as harmless text could, in some cases, be run as code.

WHAT TO DO

Ask your web developer or host to add the header `X-Content-Type-Options: nosniff`.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Checked page: <https://www.mizangroupllc.com/>

Could be improved

Mobile speed

Your home page takes about 4.6 seconds to show its main content on a phone, which puts it in Google's middle speed band, so it could load faster.

WHY IT MATTERS

Google's PageSpeed Insights loads your home page on a simulated mid-range phone and measures how long it takes to show its main content. Slow pages lose visitors, and speed is a small

factor in Google rankings. Results move a little every time the test runs, so we run it three times. This time all three runs finished, and we used the middle result.

WHAT TO DO

Ask your web developer to open Google's PageSpeed Insights report for your home page, linked in the technical details, and work through its suggestions.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Lighthouse performance score, mobile: Three runs returned 80, 80 and 80 on 2 October 2026. We use the middle one, 80. The band comes from that figure.
- Largest Contentful Paint: 4.6 s, the middle of 4.5, 4.6 and 4.6 s
- First Contentful Paint: 2.6 s (middle run)
- Total Blocking Time: 90 ms (middle run)
- Cumulative Layout Shift: 0 (middle run)
- Speed Index: 2.6 s (middle run)
- Time to Interactive: 4.9 s (middle run)
- Desktop performance score: 98 out of 100 (one run; it moves between runs)
- Full report: <https://pagespeed.web.dev/analysis?url=https%3A%2F%2Fwww.mizangroupllc.com%2F>

Everything we checked

AREA	CHECK	RESULT	WHAT WE FOUND
Website security	SSL certificate	Good	Valid for another 75 days, issued by Google Trust Services.
Website security	TLS version	Good	Uses TLS 1.3, the newest and most secure version.
Website security	HSTS (always use HTTPS)	Good	Browsers are told to always use HTTPS for 365 days.
Website security	Content Security Policy	Could be improved	No Content Security Policy is set.
Website security	X-Content-Type-Options	Could be improved	The nosniff protection is not switched on.
Domain & DNS	Domain registration	Good	Registered until 17 September 2028 (716 days from now).
Domain & DNS	Nameservers	Good	2 nameservers are listed.
Domain & DNS	DNSSEC	Could be improved	DNSSEC is not switched on for this domain.
Email security	Mail servers (MX)	Good	1 mail server(s) are listed.

AREA	CHECK	RESULT	WHAT WE FOUND
Email security	SPF (approved senders)	Good	SPF is set up and flags email from unlisted servers as suspicious (~all).
Email security	DKIM (email signatures)	Good	DKIM signing keys are published (selector: google).
Email security	DMARC (anti-spoofing policy)	Good	DMARC sends forged emails to spam (p=quarantine).
Site health	Search engine blocking	Good	Your home page allows search engines to list it.
Site health	Page title	Good	Your home page title is "Mizan Group LLC · Centreville, Virginia", a good length at 39 characters.
Site health	Meta description	Could be improved	Your home page description is 177 characters long, so Google will likely cut it off in search results.
Site health	Canonical tag	Good	Your home page tells search engines which address is its main one.
Site health	Main heading	Good	Your home page has one main heading: "Professional service, delivered personally".
Site health	Mobile viewport	Good	Your home page is set up to fit phone screens.
Site health	Structured data matches the page	Good	The 4 links in your home page structured data match the visible page.
Site health	Heading order	Good	Your 22 headings are in order, with no levels skipped.
Site health	Image alt text	Good	2 of the 2 images on your home page have a description.
Site health	Social preview	Good	Your home page has a title, description and image for link previews.

AREA	CHECK	RESULT	WHAT WE FOUND
Site health	Sitemap and robots	Good	Your sitemap lists 27 pages, and your robots.txt file points search engines to it.
Site health	Page weight	Good	Your home page is 98 KB before images, and your server started sending it in 0.11 seconds.
Site health	Redirect chain	Good	Your address reaches https://www.mizangroupllc.com/ in 1 redirect, which is normal.
Site health	Real-world loading speed	Not checked	Your website does not yet get enough traffic for Google to publish real-world speed data. This is common for small businesses and is not a problem.
Site health	Mobile speed	Could be improved	Your home page takes about 4.6 seconds to show its main content on a phone, which puts it in Google's middle speed band, so it could load faster.
Site health	Accessibility	Good	Google's automated accessibility test puts your home page in its top band.
Site health	Best practices	Good	Google's best-practices test puts your home page in its top band.
Google Business Profile	Google Business Profile	Not checked	We could not confirm which Google Business Profile is yours, so it is not part of this report.

What is already working

Good

SSL certificate

Valid for another 75 days, issued by Google Trust Services.

The SSL certificate proves to visitors' browsers that they are talking to your real website, and encrypts everything sent between them. If it expires or doesn't match your domain, browsers show a full-page security warning and most visitors will leave.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Issued by: Google Trust Services
- Expires: 16 December 2026
- Certificate matches the domain name: yes

Good **TLS version**

Uses TLS 1.3, the newest and most secure version.

TLS is the technology that encrypts the connection to your website. Newer versions (1.2 and 1.3) are secure; older ones (1.0 and 1.1) have known weaknesses and are rejected by modern browsers. This check shows the best version your server offered us.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Negotiated protocol: TLSv1.3

Good **HSTS (always use HTTPS)**

Browsers are told to always use HTTPS for 365 days.

HSTS tells browsers to always use the secure (HTTPS) version of your website. Without it, a visitor on an untrusted network such as public Wi-Fi can be quietly redirected to an insecure copy of the site.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Header value: max-age=31536000
- Checked page: <https://www.mizangroupllc.com/>

Good **Domain registration**

Registered until 17 September 2028 (716 days from now).

Your domain name is rented from a registrar and has to be renewed, usually every year. If the renewal is missed, your website and email stop working, and someone else could register the name.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Registrar: Cloudflare, Inc.
- Expires: 17 September 2028

Good **Nameservers**

2 nameservers are listed.

Nameservers are the directory servers that tell the internet where your website and email live. Having at least two means one can fail without taking everything offline.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Nameserver: michelle.ns.cloudflare.com
- Nameserver: trey.ns.cloudflare.com

Good Mail servers (MX)

1 mail server(s) are listed.

MX records tell other mail systems where to deliver email addressed to your domain. Without them, email sent to you bounces.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Priority 1: smtp.google.com

Good SPF (approved senders)

SPF is set up and flags email from unlisted servers as suspicious (~all).

SPF is a published list of the servers allowed to send email from your domain. Receiving mail systems use it to spot forged emails that pretend to come from you.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- SPF record: v=spf1 include:_spf.google.com ~all

Good DKIM (email signatures)

DKIM signing keys are published (selector: google).

DKIM adds a tamper-proof digital signature to every email you send. Receivers check the signature against a key published in your DNS to confirm the message really came from you and wasn't altered.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Selector checked: google
- Selector checked: fm1
- Selector checked: fm2
- Selector checked: fm3
- Selector checked: selector1
- Selector checked: selector2
- DKIM key found: google._domainkey.mizangroupllc.com

Good DMARC (anti-spoofing policy)

DMARC sends forged emails to spam (p=quarantine).

DMARC tells other mail systems what to do with emails that claim to be from you but fail the SPF and DKIM checks: deliver, send to spam, or reject. Without an enforcing policy, scammers can send emails that appear to come from your domain.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- DMARC record: v=DMARC1; p=quarantine; pct=100; rua=mailto:mo@mizangrouppllc.com

Good Search engine blocking

Your home page allows search engines to list it.

Search engines such as Google follow instructions a website gives them about what to list. One leftover setting, often from when the site was being built, can keep your home page out of search results, and nothing on the page itself looks wrong.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- No noindex instruction in the page or its headers, and robots.txt lets Googlebot in.

Good Page title

Your home page title is "Mizan Group LLC · Centreville, Virginia", a good length at 39 characters.

The page title is the clickable headline shown for your site in Google search results and on the browser tab. It is often the first thing a potential customer reads about you.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Title: Mizan Group LLC · Centreville, Virginia
- Length: 39 characters

Good Canonical tag

Your home page tells search engines which address is its main one.

A canonical tag tells search engines which address is the main one for a page. It makes sure the versions of your address with and without "www", or with tracking codes added, count as one page instead of competing with each other.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Canonical tag: <https://www.mizangrouppllc.com>
- Page we loaded: <https://www.mizangrouppllc.com/>

Good Main heading

Your home page has one main heading: "Professional service, delivered personally".

The main heading, the largest headline on the page, tells visitors and search engines what the page is about. Search engines give it extra weight.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Heading 1: Professional service, delivered personally

Good Mobile viewport

Your home page is set up to fit phone screens.

Most visitors to a small business website arrive on a phone. This setting tells phones to fit the page to their screen instead of showing a tiny, zoomed-out desktop version.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Viewport: width=device-width, initial-scale=1

Good Structured data matches the page

The 4 links in your home page structured data match the visible page.

Structured data is information written into your page's code for search engines rather than people. Google can show it directly in search results, prices included. If it is out of date, Google can show customers prices you no longer charge or send them to pages that no longer exist, even when the visible page is correct.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- We compared against the page as delivered, before any scripts run.
- URL <https://www.mizangroupllc.com> at block 1: url: found (page link)
- URL <https://www.mizangroupllc.com/tech> at block 1: department[0].url: found (page link)
- URL <https://www.mizangroupllc.com/digital> at block 1: department[1].url: found (page link)
- URL <https://www.mizangroupllc.com/about-me> at block 1: founder.url: found (page link)

Good Heading order

Your 22 headings are in order, with no levels skipped.

Headings work like an outline. People using screen readers move around the page by that outline, and search engines use it to understand how your content is organized.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Order: h1h2h3h3h2h3h3h3h3h3h3h2h3h3h3h3h2h2h2h2

Good Image alt text

2 of the 2 images on your home page have a description.

Alt text is a short written description of an image. Screen readers read it aloud to people with visual impairments, and search engines use it to understand your pictures. Purely decorative images can be left blank on purpose, so a few gaps can be fine.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- 2 of 2 images have a real description. We counted every image in the page, including ones that only load when a visitor scrolls down.

Good Social preview

Your home page has a title, description and image for link previews.

When someone shares your website in a text message or on Facebook or LinkedIn, these settings control the title, description and picture in the preview. Without them, the preview may be blank or show a random image from the page.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- og:title: Mizan Group LLC · Centreville, Virginia
- og:description: Computers, networks and websites for homes and small businesses in Northern Virginia. Fixed prices in writing and one point of contact, from the first call to the final invoice.
- og:image: https://cdn.prod.website-files.com/6a8c851def85a59914b1c2e5/6abec10c6f4ea530111ac10e_mizan-og-scales.png

Good Sitemap and robots

Your sitemap lists 27 pages, and your robots.txt file points search engines to it.

A sitemap is a list of the pages on your website that helps search engines find all of them. The robots.txt file is a short file of instructions for search engines, and it is the usual place to tell them where your sitemap is.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- robots.txt: <https://www.mizangrouppllc.com/robots.txt> (status 200)
- Sitemap: <https://www.mizangrouppllc.com/sitemap.xml> (status 200)
- robots.txt lists sitemap: <https://www.mizangrouppllc.com/sitemap.xml>

Good Page weight

Your home page is 98 KB before images, and your server started sending it in 0.11 seconds.

Large pages and slow servers make visitors wait, especially on phones, and many people leave a page that takes more than a few seconds to appear.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- HTML document: 97,512 bytes, decompressed. Images, scripts and styles are not included.
- Time to first byte: 112 ms, including 1 redirect(s)
- Time to last byte: 120 ms

Good

Redirect chain

Your address reaches <https://www.mizangroupllc.com/> in 1 redirect, which is normal.

A redirect sends a visitor from one address to another, for example from your address without "www" to the one with it. One is normal. Each extra step is another wait before the page starts to load.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- <https://mizangroupllc.com/> answered 301
- Final address: <https://www.mizangroupllc.com/>

Good

Accessibility

Google's automated accessibility test puts your home page in its top band.

Google's automated accessibility test checks things such as text contrast, image descriptions and button labels, which matter to visitors with impaired vision and to anyone on a small screen. An automated test catches only some problems, so a top score is a good sign rather than a guarantee.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Lighthouse accessibility score, mobile: Three runs returned 100, 100 and 100 on 2 October 2026. We use the middle one, 100.
- Full report: <https://pagespeed.web.dev/analysis?url=https%3A%2F%2Fwww.mizangroupllc.com%2F>

Good

Best practices

Google's best-practices test puts your home page in its top band.

Google's best-practices test looks for common technical issues, such as errors in the browser, outdated code libraries and images shown at the wrong size.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- Lighthouse best-practices score, mobile: Three runs returned 100, 100 and 100 on 2 October 2026. We use the middle one, 100.
- Full report: <https://pagespeed.web.dev/analysis?url=https%3A%2F%2Fwww.mizangroupllc.com%2F>

What we could not check

These were not checked this time, so they are not counted anywhere above. None of them is a finding about your website.

Not checked

Real-world loading speed

Your website does not yet get enough traffic for Google to publish real-world speed data. This is common for small businesses and is not a problem.

Google measures how quickly websites load for real visitors using Chrome, and publishes the results once a site has enough visitors. Unlike a lab test, this reflects your actual customers' phones and connections.

Not checked

Google Business Profile

We could not confirm which Google Business Profile is yours, so it is not part of this report.

Your Google Business Profile is the listing that shows your hours, phone number, reviews and location on Google Search and Maps. For a local business it often brings in more customers than the website itself. We only report on a listing when we can confirm it is yours, because another business's details would be worse than none.

TECHNICAL DETAILS, FOR WHOEVER MAKES THE CHANGE

- no listing named like "Mizan Group LLC" among 0 search results for "Mizan Group LLC Centreville"

What happens next

Nothing here is urgent. The items above are worth passing to whoever looks after your website and email.

Want us to handle it? Reply to the email this came with and tell us which items you want done, and we will quote a fixed price in writing before any work starts.

These results come only from information that is publicly visible to anyone on the internet: DNS records, the domain registry, and a single ordinary visit to the website's home page, along with the robots.txt and sitemap files that search engines read, plus Google's own PageSpeed Insights test of that page, and a search of Google's public business listings. Nothing was scanned, probed or logged into. The checks show how things looked at the time above; settings can change at any time.
